INSTRUCTIONS

GETTING STARTED

STEP 1: Remove part from box - you will see all straps are fastened and form loops, and your PI is in the neutral / flat position. It is never necessary to unfasten the loops completely from your PI. That makes it really easy to put on-and-off - just slide hand and wrist through loops both ways.

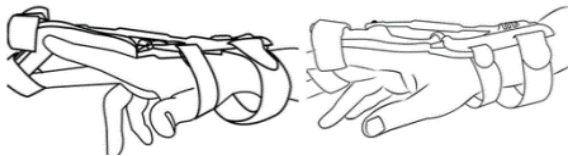

STEP 2: 2) Push hand piece upward (you will hear clicking) and strap will lock in place. Then pull down and notice it will not move - creating your player impact position

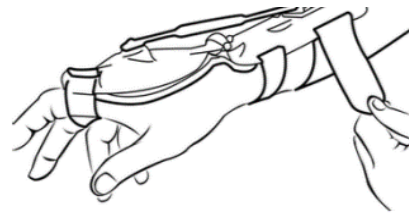

STEP 3: Lift up gently on strap and pull hand piece downward (neutral position) to return for next shot. Notice how hand piece is fully rotatable at the hinge, then locks in at top.

PUTTING IT ON

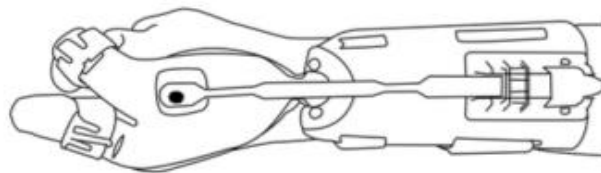

STEP 1: 1. Slide wrist, hand, and fingers through strap openings (loops) like a sleeve. Then pull finger straps so they are snug against the base of the fingers (webbing between your fingers)

STEP 2: Tighten all straps to fit snug. Release hook from loop --> pull to tighten

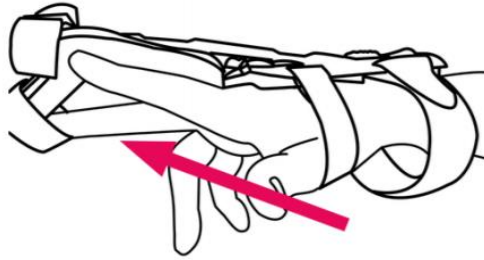

STRAPS HAVE TO BE FIRMLY AGAINST WEBBING BETWEEN FINGERS. THIS IS EXTREMELY IMPORTANT FOR YOUR PRECISION IMPACT TO WORK OPTIMALLY FOR YOU!!!

Confirm it is Centered on forearm. Ball and Socket hinge will be directly above the area where your wrist naturally hinges.

NOTE: EARLY MODELS HAD FIRM 'FINGER' STRAPS. THEY HAVE BEEN DISCONTINUED BASED ON CUSTOMER FEEDBACK THERE ARE 3 SIZES OF ELASTIC FINGER STRAPS. THE STANDARD SIZE (WHITE THREAD) IS SHIPPED WITH YOUR PRODUCT. THE OTHER 2 ARE IN A SMALL BAG IN YOUR PACKAGE. RED THREAD IS X-LARGE AND YELLOW THREAD IS SMALL

REMOVING PRECISION IMPACT

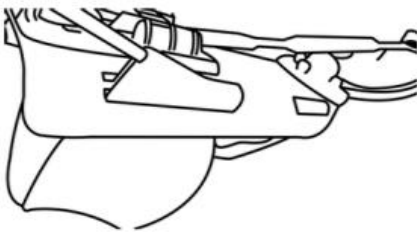

It is recommended to leave the straps fastened in 'loops' to slide your PI off. It is NOT necessary to pull straps completely through fastening slots.

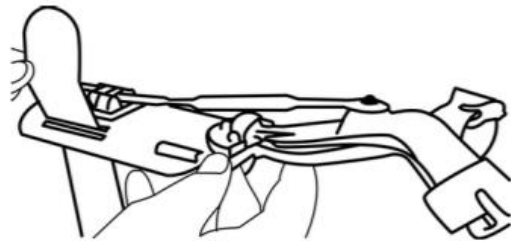

GOLFERS WITH LARGER FOREARMS

Longer 2" Strap is included in box with your PI

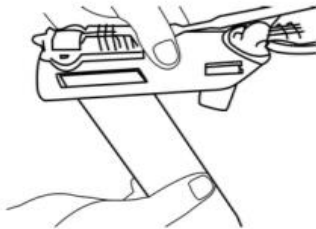

Your PI came to you with a 'Standard' size Forearm Strap. If you have especially large forearms, we have included longer strap for you. To swap it out please follow these simple instructions: **Remove standard size 2" strap from rear of wrist brace as follows:**

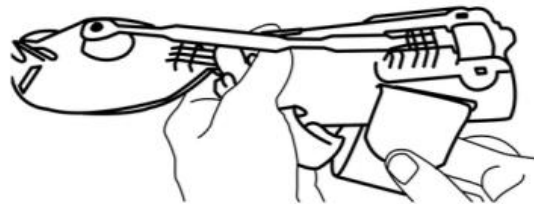

STEP 1: Pull strap out as shown -- It may help to use a small utensil to gently lift the strap out.

STEP 2: Once pulled loose, simply pull completely out of outside slot, then pull down through inside slot - place in your carry bag or golf bag

STEP 5: Push strap again downward through outside slot until you can no longer pull it. Again you will notice it is at an angle which is the correct design

STEP 6: Extend it underneath (around) wrist component and up through angled slot on other side and attach to itself to form loop -- (Same as it arrived)

PROPER CARE & STORAGE

When not in use, please store in your PI carry bag.
Also 'VERY IMPORTANT' - when not in use store indoors or in your golf bag in neutral / flat position (lift up on strap, pull hand piece forward).
